SUMMARY

Final-year Engineering student who builds things that work in the real world, from AI-powered legal aid tools for women's safety to full-stack platforms handling live inventory and payroll for actual businesses. Comfortable moving between React frontends, Python backends, and ML pipelines; have shipped production features used by real users across two internships. Looking for a role where the problems are hard and the work ships.

EXPERIENCE

Software Intern, Print Electronics and Equipment Pvt. Ltd.

Jan 2026 – Present

Flutter | Postman

- Engineered a full-featured HRMS from the ground up, delivering 7+ modules including attendance tracking, leave management, employee records, and payroll workflows.
- A role-based access control system distinguishing admin and employee permissions, ensuring data security across all modules.
- Developed an attendance regularisation flow allowing employees to flag discrepancies and admins to review and approve corrections end-to-end. Implemented audit logs and admin tracking dashboards, giving management real-time visibility into employee activity and system changes.

Software Engineering Intern, Bootee App

June 2025 – Oct 2025

React | Supabase | NextJs

- Architected and shipped an admin management platform for the Bootee fashion platform using Next.js and React, supporting 3+ core admin workflows end-to-end.
- Designed dashboards consolidating inventory, product catalogues, and order tracking, cutting order processing time by ~25%.

PROJECTS

AI-Powered Legal Aid Chatbot for Women's Safety

React Native | FastAPI | Python | Hugging Face

- Built an AI-powered mobile app providing legal aid to women, handling multilingual queries across 3+ regional languages.
- Fine-tuned MuRIL on a custom 2,000-sample dataset of legal +10 language queries, achieving 85% intent classification accuracy — a 23-point improvement over the baseline BERT model.
- Shipped 2 key modules: a court locator (Google Maps API) and a document summariser using Tesseract OCR + BERTSUM/T5

Sign Language Detection System

TensorFlow | OpenCV | Python

- A real-time sign language detection system using the SSD deep learning model for accurate hand gesture recognition.
- Deployed TensorFlow + OpenCV pipeline to classify gestures in real time, processing ~30 frames per second.

Quotation Tracking System

Next.js 15 | Supabase | React JS

- Launched a centralised quotation management system, streamlining end-to-end business operations.
- Structured 4 modular features (quotation tracking, client records, work order updates, state management), improving operational visibility for 10+ concurrent workflows.

SKILLS

Languages: Java, JavaScript, TypeScript, PHP, MySQL, Python, Flutter, SQL

Frameworks: React, ReactNative, Next.js, RestAPI, TensorFlow, Node.js, Hugging Face Transformers, API testing

Tools: Git, Postman

EDUCATION

Pillai College of Engineering

2022 – 2026

Bachelor of Engineering, Electronics and Computer Science

CGPA 8.0

Major in Cloud Computing and AI/ML

PUBLICATIONS AND AWARDS

Best Paper/Presentation Award — DMCE

AI- Powered Legal Aid Chatbot for Women Safety, [DMCE - Global Tech Convergence], April 2026
